All,

Here is information for today's discussion on Fusionizing BlueOne. I am also attaching a quick mock-up to provide an example of what it may look like in comparison to Fusion.

#### Estimates

- Estimates are based on core UI resources executing on these tasks. If other resources are used, the estimates will need to increase.
- Estimates include design / prototype, development and QA. Current LOE of BlueOne (104 mm) only includes development.
- We have 2 prototypers on BlueOne. They will need to complete other BlueOne tasks along with the estimated Fusionization effort. So, without further assistance we should look at this as 3.5 months tacked onto the project.
- Page Layouts and Dialogs must be completed prior to handing off to PC team. Other changes can be made later.
- The likely hit to the project will be 2 months. 1 month to the PC delivery and 1 month at the end of the project.
- Cherry picking this list will lead to an inconsistent Visual Design and is highly discouraged.

	<u>Prototype</u>	<u>Development</u>	<u>QA</u>
<b>Application Shell</b>			
Global Area	3 wks	2 wks	
Regional Area	3 wks	3 wks	
Non-Kiosk display	0	4 wks	
<b>Controls</b>			
Tabs	1 wk	0	
Buttons	1 wk	0	
<b>Page Layout</b>			
Form	3 wks	2 wks	
Table	3 wks	1 wks	
<b>Dialogs</b>			
Standard	4 wks	8 wks	
Wizard / Train	4 wks	2 wks	
Palettes	2 wks	2 wks	
<b>Skinning Support</b>			
Style Sheet	4 wks	3 wks	
<b>Total</b>	<b>7 mm (28 wks)</b>	<b>7 mm (28 wks)</b>	<b>4 mm</b>

#### Pros and Cons

##### Pros

- User Interface will have a consistent LOOK with Fusion
- Claiming that B1 is a step-towards Fusion will be much easier

##### Cons

- Although it will look like Fusion it will not behave like Fusion
- This could negatively impact the consistency that Fusion is trying to create (**requires Fusion UX approval**)
- Will confuse users at a behavioral level if they use Fusion and Agile PLM
- Effort is throw-away

#### BlueOne Fusionized
